

Media Release 8th February 2022

5-Stars scoring a 10 out of 10 – we top the list

The 2022 Green Electricity Guide has been released and we are proud to be once again rated as one of the Greenest Electricity Providers* in Australia.

The Green Electricity Guide has been the “go to” independent resource for customer to view electricity retailers since 2009, every time it has rated Diamond Energy in the top 2 for our commitment to renewable energy, our customer and community focus and our drive to reduce emissions in a market dominated by large centralized, coal fired electricity generators.

Mark Bertoncello, Managing Director Diamond Energy said “We’re excited to welcome those looking to switch to a greener, cleaner and cheaper electricity provider so we can continue to support and transition Australia to renewable energy. We believe that every positive change starts with a great choice, so we choose to continue our journey!”

Diamond Energy will continue to deliver more renewable energy into the market than our customers consume, enable our customers to positively direct their electricity spend to help make a difference and proactively move beyond carbon neutral by offering leading innovations in solar and battery that directly benefit customers.

Diamond Energy operates in NSW, SA, QLD and Victoria. We are 100% Australian based, we love both solar and non-solar customers and work hard to make our customers happy and to achieve a cleaner and greener future.
